

Clover D4 Guide – Intier

Lucky day to you and welcome to another round of bringing word to my RNG!

1 Motivation and general stuff

Well at the start of strategizing I thought to myself:

I don't have weave; so I can't use the usual Witchum – Torch Build nor can I weave in Evolvium, well let's just do this whole dungeon without any ancient equipment.

Oh my Lerky is +1 and it will take ages until I get enough wb runs. Huh then I guess I will find a cheap substitute that surely works.

Ah I skipped t15 completely and won't ever be able to fuse Kibusama; then I'm going to tank myself.

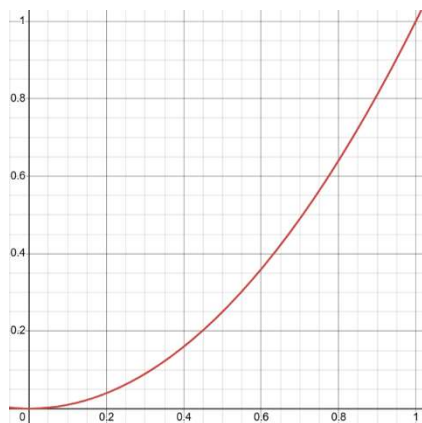

And the final component to my flawless strategizing session came in the form of utter blockheadthinking: using an unstabled Lady Sparkin felt just plain wrong; So Mir'alg it is and with that I decided I'll just not use any mythic familiars at all for this clear.

My TS combine to 38385 and I totalled to over 30k energy spend in runs.

Always be sure to fully **scout** out every possible tile to find shrines, encounters with a guaranteed Tank encounter and a good boss lineup.

The unlucky modifier rerolls every random multiplier again for a bad outcome which forces you to focus on either non-random multipliers like raw Dmg% or a single multiplier like Empower.

To calculate the unlucky proc chance you take your multiplier chance (ie. 60% evade; transform it into a decimal chance $60\% \rightarrow 0,6$; and then you square the decimal value (ie. $60\% \text{ evade} \rightarrow 0,6 \text{ evade} \rightarrow 0,6^2 = 0,36 \rightarrow 0,36\% \text{ evade}$)

The resulting curve is the standard $f(x) = x^2$ graph between 0 and 1. The closer you get to 1 (100%) proc chance the steeper the curve which means that your additional proc chance is more effective the higher you stack it.

2 Familiars

	[DARK] Fr3sTy7	23,056	12,061	3,268				
	Trombargz	17,182	7,594	15,527				
	Trombargz	17,182	7,594	15,527				
	Mir'alg	9,885	8,272	22,146				
	Oladus	23,758	6,066	10,479				

Oladus (+5)

- Brain: Attack strongest when you get hit (myth)
- Bone: Opponents first attack on you deals reduced dmg (epic)
- Chip: Evade; -20% SP Regen (myth)
- Pumps: 2x Evade (leg); 1x dmg reduction (leg)

I've found Oladus to be a nice supporting bait to help with healing/shielding during mob battles and his dmg target/random skills can sometimes finish off annoying mobs together with the enrage that Mir'alg puts on him.

Using a redirect bone on Oladus isn't advised since you don't want Oladus to catch the stray shots from Gorobot.

Mir'alg (+5)

- Brain: Spread Heal per Turn (leg)
- Bone: Full Health increased SP Regen (epic)
- Chip: Team SP regen (leg)
- Pumps: 3x Speed (leg)

Mir'alg was the core component for this whole strategy since their 2sp Transform skill not only protects the targeted teammate but also basically fills up their enrage storage. Together with the 3sp skill: give team 2sp I was able to satisfy my preparation needs in 1-2 mob fights.

2x Trombargz (+5)

- Brain: Attack Strongest Enemy when you hit an Enemy (myth)
- Bone: While above 75% health, gain damage (myth)
- Chip: Reduce Shields by 25%, gain damage (myth)
- Pumps: 3x Empower (myth)

Finding a Lerky replacement was difficult. I tried a few of the higher tier DPS familiars available to me at that point: Jacklin, Gobo Yobo, Ukalis, Stumpan But none of those options would even come close to the damage needed to quickly bring down the mob enemies or would have a shot at killing Drillo quick enough before he destroys my whole team. I even thought about delaying my Lerky grind and going for a fully stabled Fen-Ri. But in the end the Trombargz schematic dropped and I had a pretty good amount of Bargz in my stash. And hell, this familiar drops bombshells.

Not only do you have a Multihit on every single skill, two different 0sp skills with different targeting to prolong mob fights but also a killer 1sp shock fastest enemy 2 times skill.

I've used Empower over DS to speed up the Gorobot fight. Gorobot has a built in def brain and a bone with increased healing while below 25% health which makes the fight take ages. DS means more hits and more brain procs → bad.

3 Player Loadouts

Mob and Gorobot Setup

*Note: Used the Einar neck was used purely for stats, Zarli is wrong in the picture... I used Altumbis

Enchants: Full Evade

Meta Rune: Redirect 35%

Major Rune: 4x Evade

Triangle Up Rune: 50% Chance to increase Dmg reduction by 1,5% when you get hit (max 5 times)

Triangle Down Rune: 8% increased dmg while full health

Drillo Setup

*Note: Mount has 0 hp and mostly dmg and 4% empower

Enchants: Full Evade

Meta Rune: +15% Dmg while above 75% Health

Major Rune: 4x Evade

Triangle Up Rune: 50% Chance to increase Dmg reduction by 1,5% when you get hit (max 5 times)

Triangle Down Rune: 8% increased dmg while full health

Tromb Setup

*Note: Exo neck was only slotted in here since I wasn't sure if the Effect could trigger multiple times per dungeon → to be safe I only used it for Tromb fight

Enchants: Full Evade

Meta Rune: Below 25% Health, healing received is 100% more effective

Major Rune: 4x Evade

Triangle Up Rune: 50% Chance to increase Dmg reduction by 1,5% when you get hit (max 5 times)

Triangle Down Rune: 10% Dmg reduction if you have the lowest hp of your team

4 Fight behaviour

The clover dungeon is the first d4 where every enemy is augmented. For a full (player collected list) there is a nicely written document (page 6+) by the player **punchready**. See the sources section below ↓

Optimal Fighting Order

Goro → Drillo → Tromb

Mob Fights

The lineup used: **Player – Trombargz – Trombargz – Mir'alg – Oladus**

I would occasionally swap around myself and Oladus depending on where the enemies hit the most to build up the most amount shields for the next fight.

In the first fight of the dungeon I'll try to get 3sp with Mir'alg to give everyone on the team 2sp and after that protect the 2 Trombargz's with the 2sp skill from Mir'alg to give them full enrage. If I have time left I'd try to prolong the fight

with the 0sp Energizing Solo skill from Trombargz to recharge as much SP on Mir'alg as possible.

Gorobot

The lineup used: **Oladus – Trombargz – Trombargz – Mir'alg – Player**

Gorobot does hit the backline pretty hard with its 0sp hit furthest and it can easily 2 shot the player. To balance the load I sometimes swap Oladus into the back to hopefully evade a hit or two. The main gimmick in the fight is to ensure that Mir'alg can always cast their protect skill on the player in the last slot when it is needed.

To ensure that your protection isn't broken by anything but the big hitting shots you should always kill the trash mobs in the back first. And then it's just a cycle of *she protec and he also attac*.

Pomp Drillo

The lineup used: **Oladus – Trombargz – Trombargz – Mir'alg – Player**

Switch to the low stam bait setup before the fight and pray. It really does help to have full shields on the team, full enrage for both Trombargz and 4sp on Mir'alg. Mir'alg usually gets 2 turns in before your Trombargz where you can protect the player when you have full sp or revive the player. Then use the 1sp hit fastest with full enrage on Drillo and pray for some lucky empowers and brain procs. If Drillo is not dead after the first wave you can sometimes get another turn in to put it down for good.

After the fight you will want to switch back to high stamina loadout. On the switch you will have very low HP which is one of the most critical moments in the dungeon. Best case would be a health shrine nearby to restore you to full. Otherwise you should hope for a mob encounter with a tank unit. Place yourself in the 4th slot (safest slot) and protect the player with Mir'alg or something until you have a safe amount of health to tank again.

Trombolini

The lineup used: **Dead – Dead – Dead – Oladus – Player**

Before the Tromb fight you will want to have full enrage for the player. Additionally you would want one extra mob fight before the final engagement. In this mob fight you try to let your Trombargz and Mir'alg die while also ensuring that you don't **Heallock** yourself in the fight. Do this by killing off the critical dps mobs and then place your Trombargz carefully in the front spots.

The best case scenario to go into then Tromb fight would be a team of only you and Oladus alive while having full shield on both and full sp and enrage on the player.

The grand strategy is to basically solo the Tromb fight and outsustain tromb until you get a turn in yourself and **DELETE** Tromb with your Dracus mount skill (which is why Dracus is required here). Tromb has an attack team brain that can proc off of shocks which is why you want as few targets as possible in your team so you don't get wiped from the True Damage. The Oladus is optimally kept alive for a bit to get some of his attack strongest brain onto Tromb.

Tromb has around 300k health and Dracus rarely deals enough dmg to fully oneshot Tromb. This takes a lot of attempts to successfully pull off. Using Extorcus for this portion would have been ideal because it not only exactly doubles this first Dracus hit but also doubles the healing you do until you get that first turn. Sadly I didn't have that acc.

5 Sources

The augment list provided by *punchready* (see site 6+ for clover d4)

- <https://tinyurl.com/BH-Augment-Info>
-

I've scoured every single guide on the glorious website bhguides.com which was created and is maintained by *BillyIdol*

- <https://bhguides.com/#t17d4>

Here I want to point out the work of *ponymarc* which influenced a lot of my decisions and ideas. Additionally I want to point out that every single guide there is for this dungeon might hold some random little information that could make or break your clear which is why I recommend reading as many as possible!

Another great source of inspiration was the intier video provided by *Pocketapple8104* over on their youtube channel

- <https://www.youtube.com/watch?v=txt2VKUTuAw&t=33s>

Finally I want to greet my guild [DÀRK] for supporting me these few years I've been part of them :]

Then I'd like to greet ***Bob, Nekinks, Swichi and JoeofAmerica*** for motivating me to do this thing. Furthermore I'd like to thank the whole t17 gang for allowing me to take top 5 in pet week for my Altumbis DC: ***Nekinks, TwoToneCowbell, Misery (Cozy), Rosethorn (Theory), ZED*** and many more ***Bit Heroes***.

And in the end I look forward to what the future generation of clover enthusiasts work out to the break this dungeon even more.

May the fortune be with you!
~ Fr3sTy7
